For Continued Farming Success
Plan Your Soil Conservation
Then Farm By That Plan!
Conserve On Feed Costs, Too

"NOT
JUST
A BAG
OF FEED"

A Feeding Program

THAT REDUCES FEED COSTS

A modern breeding
to - market feeding
program can cut
total feed costs 10
per cent and in-
crease farm profits
up to \$5 per pig
marketed. This fact
is backed by re-
search with thou-
sands of pigs at
Iowa State College.

A sound, cost-cutting life-cycle feed plan begins with
the feeding of the sow before she is bred. It varies to
fit the animal's special needs through gestation and
lactation. Then it adapts to the pre-starter, starter-
growing and growing-finishing periods for the pigs.
Try the Felco Way!

WET FIELDS MEAN LOW PROFIT

Low spots that drown out year after year can be
discouraging land to farm

Even if water doesn't stand long enough to kill
crops, clogged-up soil will prevent top yields.

Teamed up with good soil conservation, your tile
system can give top service for years.

Stop in and explain your drainage problems today.
We provide the best in drainage.
